

CUSTOM LINE OF SPORTS FIELD MATERIALS

NR34 Drying Agent

Nobody wants a rain delay or a muddy, sippy field. The quick answer to a wet field after rain is NR34 Drying Agent. This product is used on any turf area, infield-skinned surfaces, pitcher's mound, home plate, and warning tracks to absorb moisture. Here are the additional benefits of this product:

- Very absorbent
- Improves surface playability fast, while promoting safety
- Easy to use

NR34 Infield Conditioner

Every field needs an infield conditioner to blend with the infield mix. This mixture is used in all infield clay areas, even the mound and home plate areas. NR34 Infield Conditioner is a red super calcined clay the is used to provide the needed moisture retention a sports field manager desires. Additional features include:

- Enhances surface playability, field appearance, and safety
- Assists in proper field drainage
- Reduces Compaction and provides permanent porosity

NR34 Black Label Infield Conditioner

NR34 Black Label Infield Conditioner is a premium version of NR34 Infield Conditioner this product has the addition of patented surfactant technology. The additional benefits are as follows:

- Increased water filtration into infield mix
- Reduces dust and hardness on the playing field
- Maintains a high moisture level for a longer period of time
- Improved playability with reduced maintenance
